Graphene was first prepared in 2004 by peeling a single layer of graphene using sticky tape and a pencil .During the past several years, various methods for producing graphene have been developed, such as micromechanical exfoliation, epitaxial growth or chemical vapour deposition (CVD) epitaxial growth, and chemical synthesis from graphite.

Atypical as Lederberg was at Asilomar, his optimistic vision of genetic engineering would soon lead to the development of the biotechnology industry. Over the next two years, as public concern over the dangers of recombinant DNA research grew, so too did interest in its technical and practical applications. Curing genetic diseases remained in the realms of science fiction, but it appeared that ...
